SUMMARY

Computer Science (AI & Data Science) student with hands-on experience in machine learning, NLP, and web development. Built AI-based applications including sentiment analysis, face detection, and recommendation systems. Skilled in Python and developing user-focused solutions, with strong problem-solving and communication abilities.

EDUCATION

A.K.S. University, Satna, M.P.

Sep. 2022 – May 2026

Bachelor of Technology in Computer Science (AI & Data Science)

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Probability & Statistics, Database Management Systems.

EXPERIENCE

Startup, We Style You, Satna, M.P.

Dec 2025 – Apr 2026

Web Developer Intern

- Engineered responsive web interfaces, reducing page load time by ~25%
- Deployed an AI chatbot to handle 50+ real-time user queries per session
- Developed a face analysis feature to detect skin tone and recommend personalized color palettes
- Optimized user experience through AI-driven styling suggestions, increasing engagement by ~20%
- Utilized Python, OpenCV, and TensorFlow for developing AI-powered functionalities

PROJECTS

AI-Enabled RO Website

October 2025

- Created a responsive client website with 5+ interactive pages using HTML, CSS, and JavaScript
- Integrated AI-driven recommendation features to personalize user experience
- Designed intuitive UI components to increase customer engagement by ~15%
- Delivered a fully functional solution aligned with client requirements within timeline

Age & Gender Prediction using Image

January 2025

- Designed a deep learning model to classify age and gender from facial images, achieving ~82% accuracy
- Trained the model on a dataset of 5,000+ images to enhance prediction performance
- Applied image preprocessing and feature engineering techniques, boosting accuracy by ~15%
- Leveraged Python, OpenCV, and deep learning frameworks for model development

Sentiment Analysis on Twitter Data

November 2024

- Developed an NLP-based model to classify 10,000+ tweets into sentiment categories with ~85% accuracy
- Performed data preprocessing, tokenization, and feature extraction to strengthen model performance
- Enhanced classification results by addressing negation cases (e.g., "not happy")
- Utilized Python, Pandas, NumPy, and Scikit-learn for implementation

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, HTML/CSS

Tools: VS Code, Git, GitHub

Platforms: Google Colab, Anaconda, Jupyter Notebook, JupyterLab

Technologies: Machine Learning, NLP, Computer Vision, Data Analysis, REST APIs
